

Adaptor BB0029W1 of Control System SandRA Z200 line

The Adaptor Board **BB0029W1** belongs to the **SandRA Z200** family that is mostly applied in the field of **conventional power industry** and in many **industrial fields**. In development of our products, we pay particular attention to their **safety** and **reliability** and proceed from our rich experiences in control systems production.

The Adaptor is used to supply four **galvanically isolated** supply voltages for passive loops of analog current inputs or to connect the sensor directly to the **analog board** and to convert its voltage outputs to a current signal.

- Designed for 19" rack
- Board dimensions 100 x 160 mm
- One Dsub connection connector
- 4 voltage converters to current signal
- 4 DC/DC converters for supplying current loops
