

Adaptor BB0030W1 of Control System SandRA Z200 line

Adaptor Board **BB0030W1** belongs to the Control System **SandRA Z200** family. This is designed for controlling in many industrial fields and in the field of conventional power industry. The Z200 series products are based on our **proven** previous systems, which have been applied **all over the world** and have enjoyed great **satisfaction** of their users.

After plugging into the rack, the adapter performs the following function, the input supply voltage is applied to the input connector. The input circuits provide **protection** against overvoltage, polarity reversal and filter out part of the interference. At the output, it provides voltage for powering the control system. The **BB0030W1 Adaptor** is also equipped with two fans, which ensure **cooling of the Z200 boards** in the rack.

- Designed for 19 "rack
- Board dimensions 162 x 100 mm
- Input voltage 24V
- Power 40W
- Basic protection against overvoltage and overcurrent
- Diagnostic LEDs
